

# Physics Equation List :Form 4

## Introduction to Physics

### Relative Deviation

---

$$\text{Relative Deviation} = \frac{\text{Mean Deviation}}{\text{Mean Value}} \times 100\%$$

### Prefixes

---

Prefixes	Value	Standard form	Symbol
Tera	1 000 000 000 000	$10^{12}$	T
Giga	1 000 000 000	$10^9$	G
Mega	1 000 000	$10^6$	M
Kilo	1 000	$10^3$	k
deci	0.1	$10^{-1}$	d
centi	0.01	$10^{-2}$	c
milli	0.001	$10^{-3}$	m
micro	0.000 001	$10^{-6}$	$\mu$
nano	0.000 000 001	$10^{-9}$	n
pico	0.000 000 000 001	$10^{-12}$	p

### Units for Area and Volume

---

$1 \text{ m} = 10^2 \text{ cm}$	$(100 \text{ cm})$	$1 \text{ cm} = 10^{-2} \text{ m}$	$(\frac{1}{100} \text{ m})$
$1 \text{ m}^2 = 10^4 \text{ cm}^2$	$(10,000 \text{ cm}^2)$	$1 \text{ cm}^2 = 10^{-4} \text{ m}^2$	$(\frac{1}{10,000} \text{ m}^2)$
$1 \text{ m}^3 = 10^6 \text{ cm}^3$	$(1,000,000 \text{ cm}^3)$	$1 \text{ cm}^3 = 10^{-6} \text{ m}^3$	$(\frac{1}{1,000,000} \text{ m}^3)$

# Force and Motion

## Average Speed

---

$$\text{Average Speed} = \frac{\text{Total Distance}}{\text{Total Time}}$$

## Velocity

---

$$v = \frac{s}{t}$$

$v = \text{velocity}$  ( $ms^{-1}$ )  
 $s = \text{displacement}$  ( $m$ )  
 $t = \text{time}$  ( $s$ )

## Acceleration

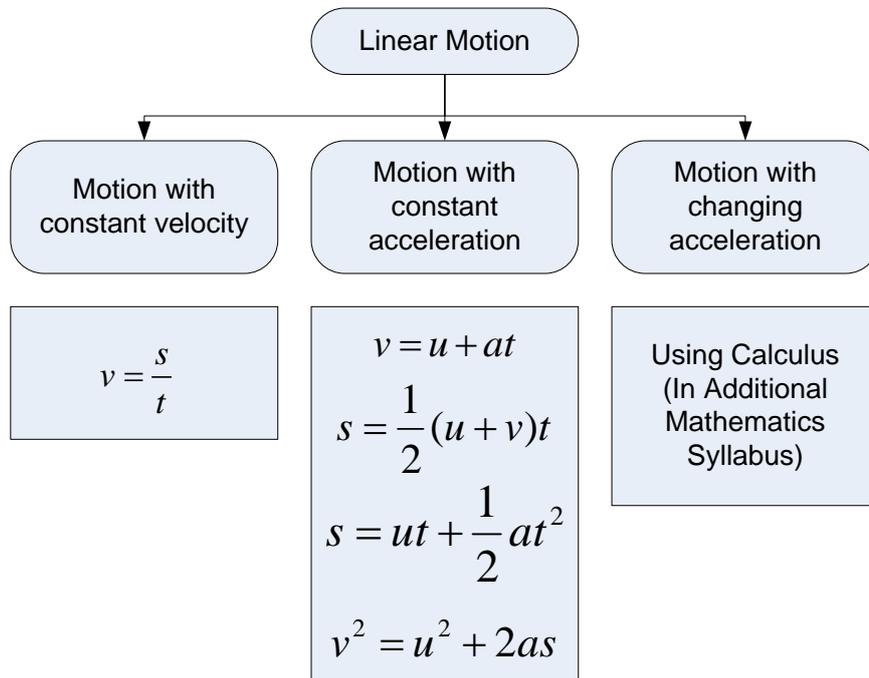

---

$$a = \frac{v - u}{t}$$

$a = \text{acceleration}$  ( $ms^{-2}$ )  
 $v = \text{final velocity}$  ( $ms^{-1}$ )  
 $u = \text{initial velocity}$  ( $ms^{-1}$ )  
 $t = \text{time for the velocity change}$  ( $s$ )

## Equation of Linear Motion

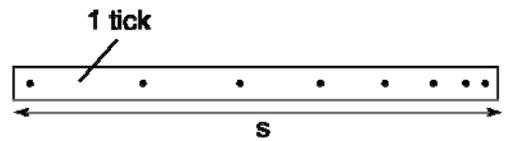

---

$u = \text{initial velocity}$  ( $ms^{-1}$ )  
 $v = \text{final velocity}$  ( $ms^{-1}$ )  
 $a = \text{acceleration}$  ( $ms^{-2}$ )  
 $s = \text{displacement}$  ( $m$ )  
 $t = \text{time}$  ( $s$ )

## Ticker Tape

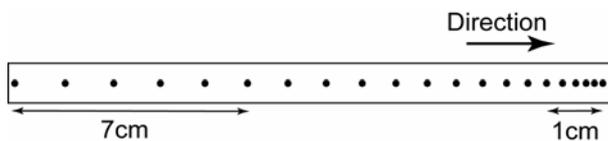

### Finding Velocity:

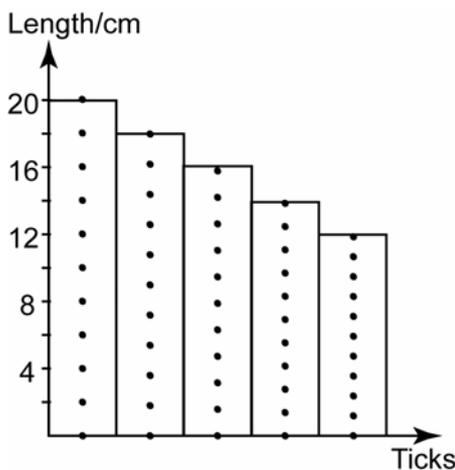

$$\text{velocity} = \frac{s}{\text{number of ticks} \times 0.02\text{s}}$$

$$1 \text{ tick} = 0.02\text{s}$$

### Finding Acceleration:

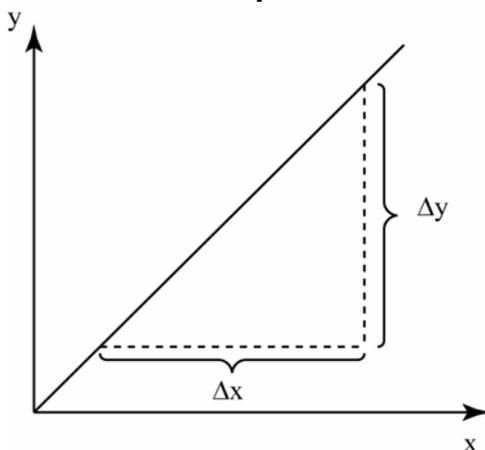

$$a = \frac{v - u}{t}$$

$a = \text{acceleration}$   $(\text{ms}^{-2})$   
 $v = \text{final velocity}$   $(\text{ms}^{-1})$   
 $u = \text{initial velocity}$   $(\text{ms}^{-1})$   
 $t = \text{time for the velocity change}$   $(\text{s})$

## Graph of Motion

### Gradient of a Graph

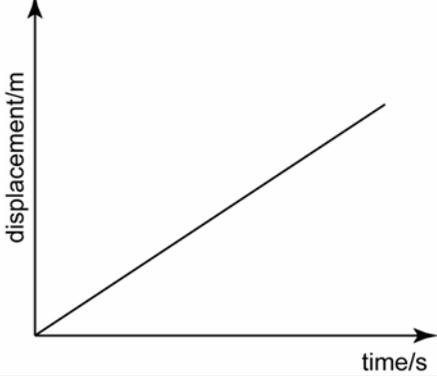

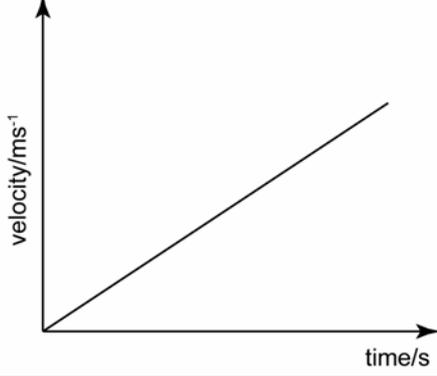

The gradient 'm' of a line segment between two points and is defined as follows:

$$\text{Gradient, } m = \frac{\text{Change in y coordinate, } \Delta y}{\text{Change in x coordinate, } \Delta x}$$

or

$$m = \frac{\Delta y}{\Delta x}$$

Displacement-Time Graph	Velocity-Time Graph
	
<p>Gradient = Velocity (<math>\text{ms}^{-1}</math>)</p>	<p>Gradient = Acceleration (<math>\text{ms}^{-2}</math>)</p> <p>Area in between the graph and x-axis = Displacement</p>

**Momentum**

$$p = m \times v$$

*p* = momentum ( $\text{kg ms}^{-1}$ )  
*m* = mass ( $\text{kg}$ )  
*v* = velocity ( $\text{ms}^{-1}$ )

**Principle of Conservation of Momentum**

$$m_1u_1 + m_2u_2 = m_1v_1 + m_2v_2$$

- m*<sub>1</sub> = mass of object 1 ( $\text{kg}$ )
- m*<sub>2</sub> = mass of object 2 ( $\text{kg}$ )
- u*<sub>1</sub> = initial velocity of object 1 ( $\text{ms}^{-1}$ )
- u*<sub>2</sub> = initial velocity of object 2 ( $\text{ms}^{-1}$ )
- v*<sub>1</sub> = final velocity of object 1 ( $\text{ms}^{-1}$ )
- v*<sub>2</sub> = final velocity of object 2 ( $\text{ms}^{-1}$ )

**Newton's Law of Motion**

**Newton's First Law**

In the absence of external forces, an object at rest remains at rest and an object in motion continues in motion with a constant velocity (that is, with a constant speed in a straight line).

**Newton's Second Law**

---

$$F \propto \frac{mv - mu}{t}$$

$$F = ma$$

The rate of change of momentum of a body is directly proportional to the resultant force acting on the body and is in the same direction.

$F = \text{Net Force}$  (N or kgms<sup>-2</sup>)

$m = \text{mass}$  (kg)

$a = \text{acceleration}$  (ms<sup>-2</sup>)

**Implication**

When there is resultant force acting on an object, the object will **accelerate** (moving faster, moving slower or change direction).

**Newton's Third Law**

---

Newton's third law of motion states that for every force, there is a reaction force with the same magnitude but in the opposite direction.

**Impulse**

---

$$\text{Impulse} = Ft$$

$F = \text{force}$  (N)

$t = \text{time}$  (s)

$$\text{Impulse} = mv - mu$$

$m = \text{mass}$  (kg)

$v = \text{final velocity}$  (ms<sup>-1</sup>)

$u = \text{initial velocity}$  (ms<sup>-1</sup>)

**Impulsive Force**

---

$$F = \frac{mv - mu}{t}$$

$F = \text{Force}$  (N or kgms<sup>-2</sup>)

$t = \text{time}$  (s)

$m = \text{mass}$  (kg)

$v = \text{final velocity}$  (ms<sup>-1</sup>)

$u = \text{initial velocity}$  (ms<sup>-1</sup>)

**Gravitational Field Strength**

---

$$g = \frac{F}{m}$$

$g = \text{gravitational field strength}$  (N kg<sup>-1</sup>)

$F = \text{gravitational force}$  (N or kgms<sup>-2</sup>)

$m = \text{mass}$  (kg)

**Weight**

---

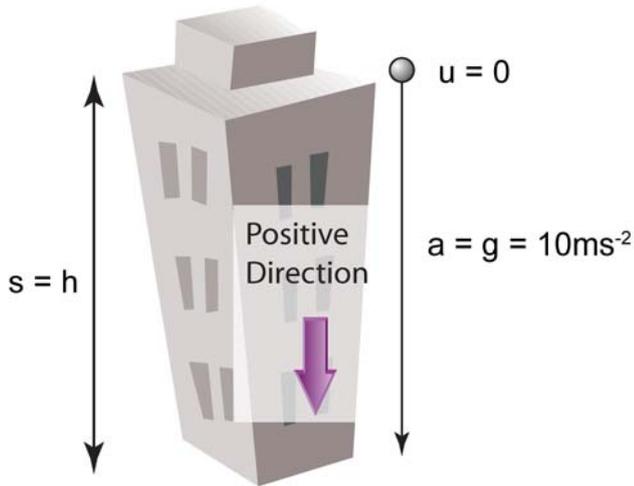

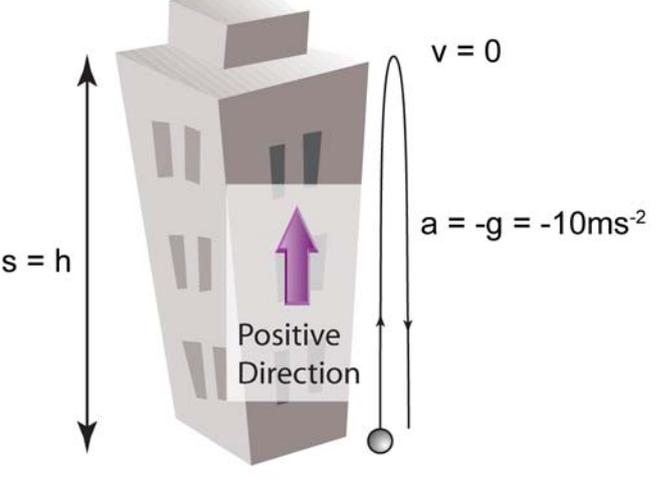

$$W = mg$$

$W = \text{Weight}$  (N or kgms<sup>-2</sup>)

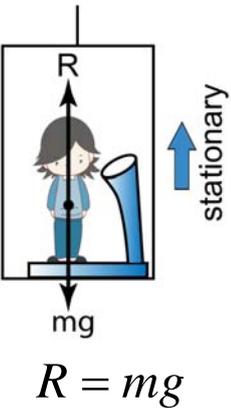

$m = \text{mass}$  (kg)

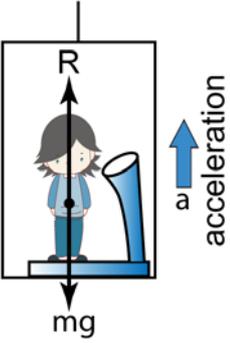

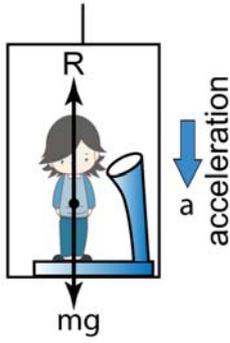

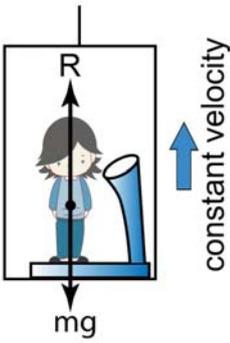

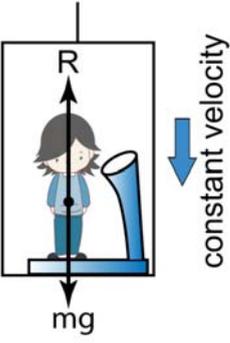

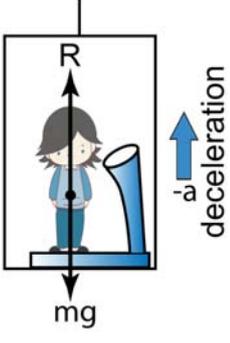

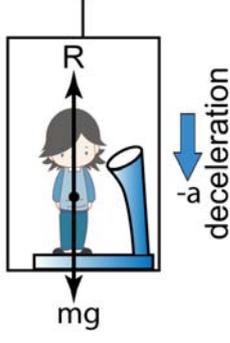

$g = \text{gravitational field strength/gravitational acceleration}$  (ms<sup>-2</sup>)

**Vertical Motion**

	
<ul style="list-style-type: none"> <li>• If an object is release from a high position:</li> <li>• The initial velocity, <math>u = 0</math>.</li> <li>• The acceleration of the object = gravitational acceleration = <math>10\text{ms}^{-2}</math> (or <math>9.81\text{ ms}^{-2}</math>).</li> <li>• The displacement of the object when it reach the ground = the height of the original position, <math>h</math>.</li> </ul>	<ul style="list-style-type: none"> <li>• If an object is launched vertically upward:</li> <li>• The velocity at the maximum height, <math>v = 0</math>.</li> <li>• The deceleration of the object = -gravitational acceleration = <math>-10\text{ms}^{-2}</math> (or <math>-9.81\text{ ms}^{-2}</math>).</li> <li>• The displacement of the object when it reach the ground = the height of the original position, <math>h</math>.</li> </ul>

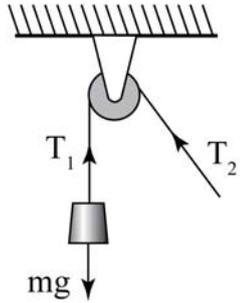

**Lift**

<p><b>In Stationary</b></p>  <p style="text-align: center;"><math>R = mg</math></p>	<ul style="list-style-type: none"> <li>• When a man standing inside an elevator, there are two forces acting on him.             <ul style="list-style-type: none"> <li>(a) His weight, which acting downward.</li> <li>(b) Normal reaction (R), acting in the opposite direction of weight.</li> </ul> </li> <li>• The reading of the balance is equal to the normal reaction.</li> </ul>
--	--

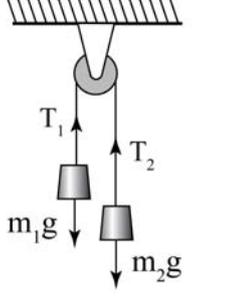

<p><b>Moving Upward with positive acceleration</b></p>  $R = mg + ma$	<p><b>Moving downward with positive acceleration</b></p>  $R = mg - ma$
<p><b>Moving Upward with constant velocity</b></p>  $R = mg$	<p><b>Moving downward with constant velocity.</b></p>  $R = mg$
<p><b>Moving Upward with negative acceleration</b></p>  $R = mg - ma$	<p><b>Moving downward with negative acceleration</b></p>  $R = mg + ma$

**Smooth Pulley**

**With 1 Load**

	$T_1 = T_2$	<b>Moving with uniform speed:</b> $T_1 = mg$
	<b>Stationary:</b> $T_1 = mg$	<b>Accelerating:</b> $T_1 - mg = ma$

**With 2 Loads**

	<b>Finding Acceleration:</b> (If $m_2 > m_1$ ) $m_2g - m_1g = (m_1 + m_2)a$
	<b>Finding Tension:</b> (If $m_2 > m_1$ ) $T_1 = T_2$ $T_1 - m_1g = ma$ $m_2g - T_2 = ma$

**Vector**

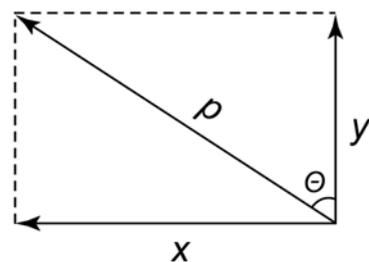

**Vector Addition (Perpendicular Vector)**

$$\text{Magnitude} = \sqrt{x^2 + y^2}$$

$$\text{Direction} = \tan^{-1} \frac{|y|}{|x|}$$

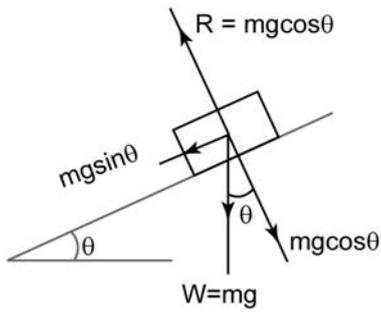

**Vector Resolution**

$$|x| = |p| \sin \theta$$

$$|y| = |p| \cos \theta$$

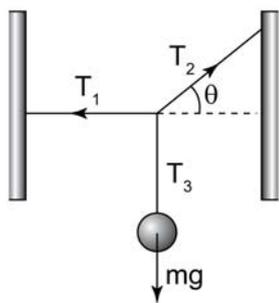

**Inclined Plane**

Component parallel to the plane =  $mg \sin \theta$

Component perpendicular to the plane =  $mg \cos \theta$

**Forces In Equilibrium**

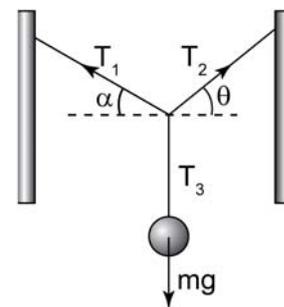

$$T_3 = mg$$

$$T_2 \sin \theta = mg$$

$$T_2 \cos \theta = T_1$$

$$T_1 \tan \theta = mg$$

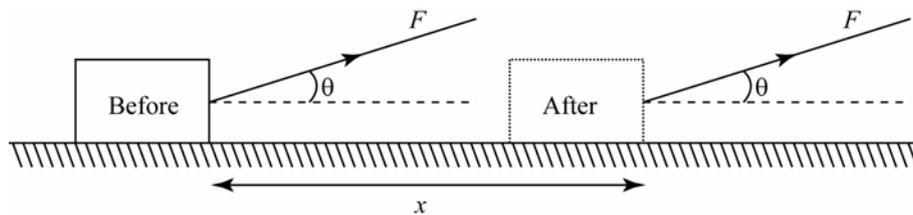

$$T_3 = mg$$

$$T_2 \cos \theta = T_1 \cos \alpha$$

$$T_2 \sin \theta + T_1 \sin \alpha = mg$$

**Work Done**

$$W = Fx \cos \theta$$

$W =$  Work Done (J or Nm)  
 $F =$  Force (N or  $kgms^{-2}$ )  
 $x =$  displacement (m)  
 $\theta =$  angle between the force and the direction of motion ( $^{\circ}$ )

When the force and motion are in the same direction.

$$W = Fs$$

$W =$  Work Done (J or Nm)  
 $F =$  Force (N or  $kgms^{-2}$ )  
 $s =$  displacement (m)

## Energy

---

### Kinetic Energy

$$E_K = \frac{1}{2}mv^2$$

$E_K =$ Kinetic Energy	(J)
$m =$ mass	(kg)
$v =$ velocity	( $ms^{-1}$ )

### Gravitational Potential Energy

$$E_P = mgh$$

$E_P =$ Potential Energy	(J)
$m =$ mass	(kg)
$g =$ gravitational acceleration	( $ms^{-2}$ )
$h =$ height	(m)

### Elastic Potential Energy

$$E_P = \frac{1}{2}kx^2$$

$E_P =$ Potential Energy	(J)
$k =$ spring constant	( $N m^{-1}$ )
$x =$ extension of spring	(m)

$$E_P = \frac{1}{2}Fx$$

$F =$ Force	(N)
-------------	-----

## Power and Efficiency

---

### Power

$$P = \frac{W}{t}$$

$P =$ power	(W or $Js^{-1}$ )
$W =$ work done	(J or Nm)
$E =$ energy change	(J or Nm)
$t =$ time	(s)

$$P = \frac{E}{t}$$

### Efficiency

$$\text{Efficiency} = \frac{\text{Useful Energy}}{\text{Energy}} \times 100\%$$

Or

$$\text{Efficiency} = \frac{\text{Power Output}}{\text{Power Input}} \times 100\%$$

## Hooke's Law

---

$$F = kx$$

$F =$ Force	(N or $kgms^{-2}$ )
$k =$ spring constant	( $N m^{-1}$ )
$x =$ extension or compression of spring	(m)

# Force and Pressure

## Density

---

$$\rho = \frac{m}{V}$$

$\rho$  = density (kg m<sup>-3</sup>)  
 $m$  = mass (kg)  
 $V$  = volume (m<sup>3</sup>)

## Pressure

---

$$P = \frac{F}{A}$$

$P$  = Pressure (Pa or N m<sup>-2</sup>)  
 $A$  = Area of the surface (m<sup>2</sup>)  
 $F$  = Force acting normally to the surface (N or kgms<sup>-2</sup>)

## Liquid Pressure

$$P = h\rho g$$

$h$  = depth (m)  
 $\rho$  = density (kg m<sup>-3</sup>)  
 $g$  = gravitational Field Strength (N kg<sup>-1</sup>)

## Pressure in Liquid

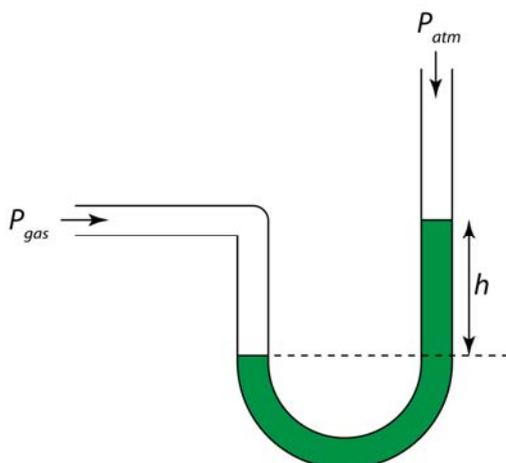

$$P = P_{atm} + h\rho g$$

$h$  = depth (m)  
 $\rho$  = density (kg m<sup>-3</sup>)  
 $g$  = gravitational Field Strength (N kg<sup>-1</sup>)  
 $P_{atm}$  = atmospheric Pressure (Pa or N m<sup>-2</sup>)

## Gas Pressure

---

### Manometer

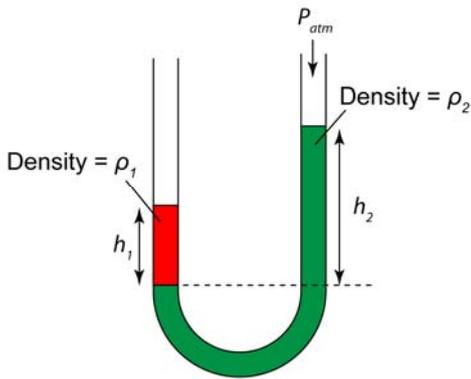

$$P = P_{atm} + h\rho g$$

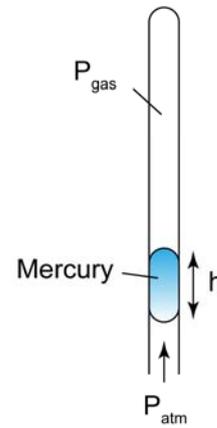

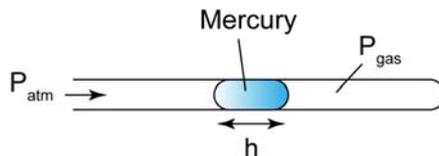

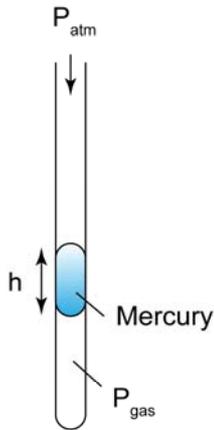

$P_{gas}$  = Pressure (Pa or N m<sup>-2</sup>)  
 $P_{atm}$  = Atmospheric Pressure (Pa or N m<sup>-2</sup>)  
 $g$  = gravitational field strength (N kg<sup>-1</sup>)

**U=tube**

$$h_1 \rho_1 = h_2 \rho_2$$

**Pressure in a Capillary Tube**

$$P_{gas} = P_{atm} + h\rho g$$

$$P_{gas} = P_{atm}$$

$$P_{gas} = P_{atm} - h\rho g$$

$P_{gas}$  = gas pressure in the capillary tube

(Pa or  $N m^{-2}$ )

$P_{atm}$  = atmospheric pressure

(Pa or  $N m^{-2}$ )

$h$  = length of the captured mercury

(m)

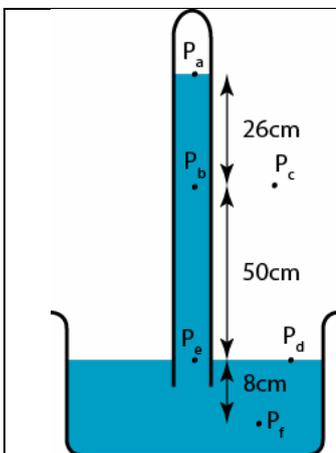

$\rho$  = density of mercury

( $kg m^{-3}$ )

$g$  = gravitational field strength

( $N kg^{-1}$ )

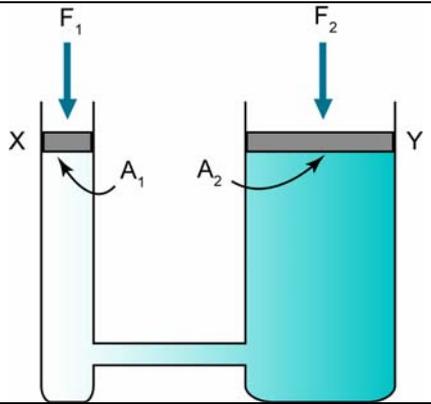

**Barometer**

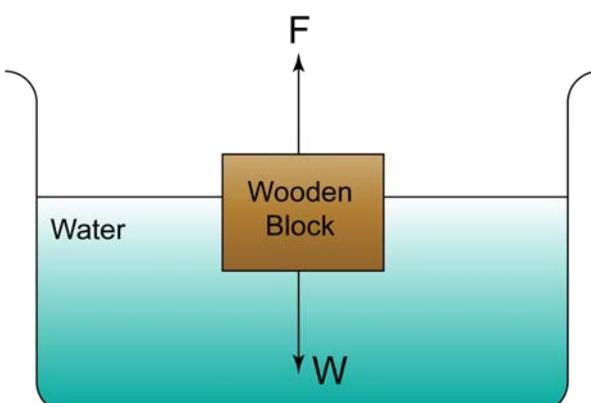

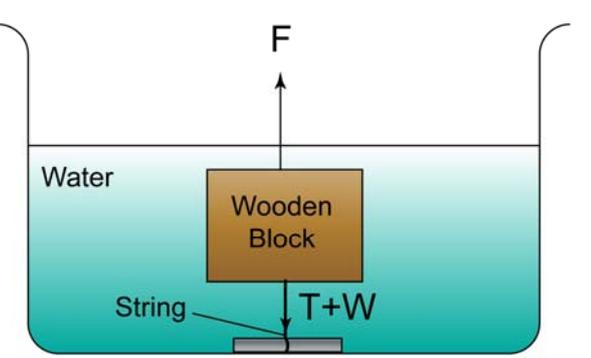

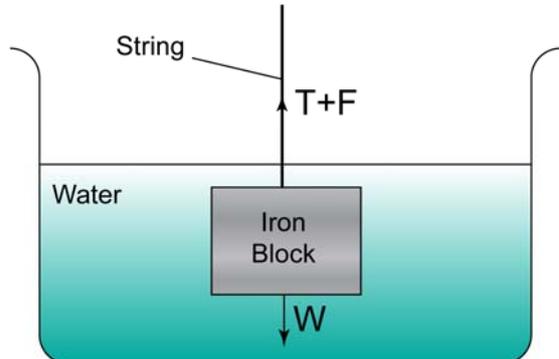

Pressure in unit cmHg	Pressure in unit Pa
$P_a = 0$	$P_a = 0$
$P_b = 26$	$P_b = 0.26 \times 13600 \times 10$
$P_c = 76$	$P_c = 0.76 \times 13600 \times 10$
$P_d = 76$	$P_d = 0.76 \times 13600 \times 10$
$P_e = 76$	$P_e = 0.76 \times 13600 \times 10$
$P_f = 84$	$P_f = 0.84 \times 13600 \times 10$

(Density of mercury =  $13600 kg m^{-3}$ )

**Pascal's Principle**

	$\frac{F_1}{A_1} = \frac{F_2}{A_2}$ <p> <i>F<sub>1</sub></i> = Force exerted on the small piston  <i>A<sub>1</sub></i> = area of the small piston  <i>F<sub>2</sub></i> = Force exerted on the big piston  <i>A<sub>2</sub></i> = area of the big piston         </p>
---	---

**Archimedes Principle**

	<p>Weight of the object, <math>W = \rho_1 V_1 g</math></p> <p>Upthrust, <math>F = \rho_2 V_2 g</math></p> <p> <i>ρ<sub>1</sub></i> = density of wooden block  <i>V<sub>1</sub></i> = volume of the wooden block  <i>ρ<sub>2</sub></i> = density of water  <i>V<sub>2</sub></i> = volume of the displaced water  <i>g</i> = gravitational field strength         </p>
	
<p>Density of water &gt; Density of wood</p> $F = T + W$ $\rho V g = T + mg$	<p>Density of Iron &gt; Density of water</p> $T + F = W$ $\rho V g + T = mg$

**Heat****Heat Change**

$$Q = mc\theta$$

$m = \text{mass}$  (kg)  
 $c = \text{specific heat capacity}$  ( $\text{J kg}^{-1} \text{ } ^\circ\text{C}^{-1}$ )  
 $\theta = \text{temperature change}$  ( $^\circ$ )

Electric Heater	Mixing 2 Liquid
Energy Supply, $E = Pt$ Energy Receive, $Q = mc\theta$  Energy Supply, E = Energy Receive, Q  $Pt = mc\theta$  $E = \text{electrical Energy (J or Nm)}$ $P = \text{Power of the electric heater (W)}$ $t = \text{time (in second)} \quad (\text{s})$  $Q = \text{Heat Change (J or Nm)}$ $m = \text{mass} \quad (\text{kg})$ $c = \text{specific heat capacity (J kg}^{-1} \text{ } ^\circ\text{C}^{-1}\text{)}$ $\theta = \text{temperature change (}^\circ\text{)}$	Heat Gain by Liquid 1 = Heat Loss by Liquid 2 $m_1c_1\theta_1 = m_2c_2\theta_2$  $m_1 = \text{mass of liquid 1}$ $c_1 = \text{specific heat capacity of liquid 1}$ $\theta_1 = \text{temperature change of liquid 1}$  $m_2 = \text{mass of liquid 2}$ $c_2 = \text{specific heat capacity of liquid 2}$ $\theta_2 = \text{temperature change of liquid 2}$

**Specific Latent Heat**

$$Q = mL$$

$Q = \text{Heat Change}$  (J or Nm)  
 $m = \text{mass}$  (kg)  
 $L = \text{specific latent heat}$  ( $\text{J kg}^{-1}$ )

**Boyle's Law**

$$P_1V_1 = P_2V_2$$

(Requirement: Temperature in constant)

**Pressure Law**

$$\frac{P_1}{T_1} = \frac{P_2}{T_2}$$

(Requirement: Volume is constant)

**Charles's Law**

$$\frac{V_1}{T_1} = \frac{V_2}{T_2}$$

(Requirement: Pressure is constant)

**Universal Gas Law**

$$\frac{P_1V_1}{T_1} = \frac{P_2V_2}{T_2}$$

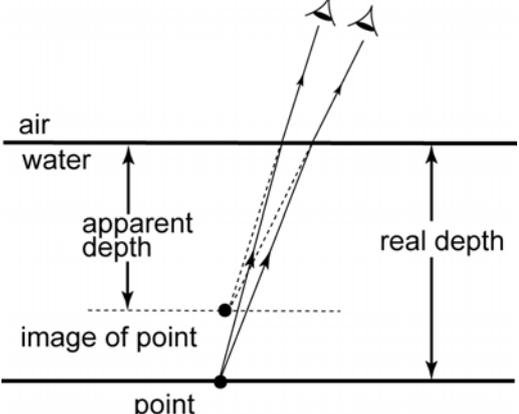

*P = Pressure* (Pa or cmHg .....)  
*V = Volume* (m<sup>3</sup> or cm<sup>3</sup>)  
*T = Temperature* (MUST be in K(Kelvin))

**Light**

**Refractive Index**

**Snell's Law**

**Real depth/Apparent Depth**

	$n = \frac{\sin i}{\sin r}$ <p><i>n = refractive index</i> (No unit)  <i>i = angle of incident</i> (°)  <i>r = angle of reflection</i> (°)</p>
 <p>The diagram shows a horizontal line representing the interface between air (top) and water (bottom). A point is marked at the bottom of the water layer. Two light rays originate from this point and travel upwards. At the interface, they refract away from the normal. Dotted lines extend backwards from these rays to a point labeled 'image of point' at a shallower depth. Vertical arrows indicate the 'real depth' from the point to the surface and the 'apparent depth' from the image to the surface.</p>	$n = \frac{D}{d}$ <p><i>n = refractive index</i> (No unit)  <i>D = real depth</i> (m or cm...)  <i>d = apparent depth</i> (m or cm...)</p>
<p><b>Speed of light</b></p> $n = \frac{c}{v}$ <p><i>n = refractive index</i> (No unit)  <i>c = speed of light in vacuum</i> (ms<sup>-1</sup>)  <i>v = speed of light in a medium (like water, glass ...)</i> (ms<sup>-1</sup>)</p>	<p><b>Total Internal Reflection</b></p> $n = \frac{1}{\sin c}$ <p><i>n = refractive index</i> (No unit)  <i>c = critical angle</i> (°)</p>

**Lens**

**Power**

$$P = \frac{1}{f}$$

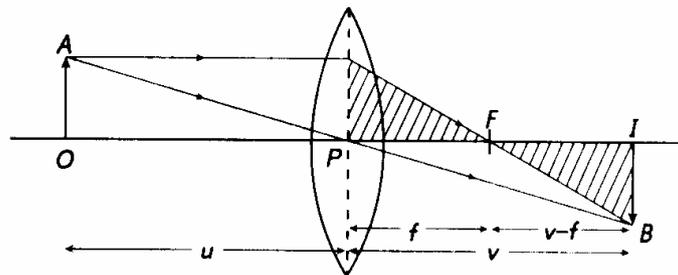

*P = Power* (D(Diopter))  
*f = focal length* (m)

**Linear Magnification**

$$m = \frac{h_i}{h_o} \qquad m = \frac{v}{u} \qquad \frac{h_i}{h_o} = \frac{v}{u}$$

*m = linear magnification* (No unit)  
*u = distance of object* (m or cm...)  
*v = distance of image* (m or cm...)  
*h<sub>i</sub> = height of image* (m or cm...)  
*h<sub>o</sub> = height of object* (m or cm...)

**Lens Equation**

$$\frac{1}{u} + \frac{1}{v} = \frac{1}{f}$$

**Conventional symbol**

	positive	negative
<i>u</i>	Real object	Virtual object
<i>v</i>	Real image	Virtual image
<i>f</i>	Convex lens	Concave lens

## Astronomical Telescope

---

### Magnification,

$$m = \frac{P_e}{P_o} \qquad m = \frac{f_o}{f_e}$$

$m$  = linear magnification  
 $P_e$  = Power of the eyepiece  
 $P_o$  = Power of the objective lens  
 $f_e$  = focal length of the eyepiece  
 $f_o$  = focal length of the objective lens

### Distance between eye lens and objective lens

$$d = f_o + f_e$$

$d$  = Distance between eye lens and objective lens  
 $f_e$  = focal length of the eyepiece  
 $f_o$  = focal length of the objective lens

## Compound Microscope

---

### Magnification

$$\begin{aligned}
 m &= m_1 \times m_2 \\
 &= \frac{\text{Height of first image, } I_1}{\text{Height of object}} \times \frac{\text{Height of second image, } I_2}{\text{Height of first image, } I_1} \\
 &= \frac{\text{Height of second image, } I_2}{\text{Height of object, } I_1}
 \end{aligned}$$

$m$  = Magnification of the microscope  
 $m_1$  = Linear magnification of the object lens  
 $m_2$  = Linear magnification of the eyepiece

### Distance in between the two lens

$$d > f_o + f_e$$

$d$  = Distance between eye lens and objective lens  
 $f_e$  = focal length of the eyepiece  
 $f_o$  = focal length of the objective lens
